

THE CHALLENGE

Over one billion people exist on small farms on less than two dollars a day. For the small farm family irrigation is the single biggest hurdle to increasing agricultural productivity. Perpetual Prosperity Pump Foundation resolves this problem with bicycle powered Miracle Pump Irrigation Systems. We call this peddling to prosperity. If the small farmers can move water, then they can make money by sustaining a perpetual harvest. We combine solar, wind and human power.

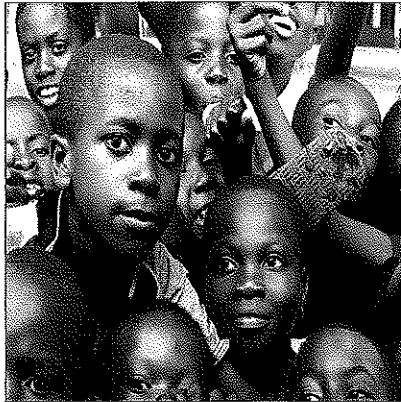

The second hurdle is to make available appropriate seeds, livestock and technology combined with proper training in organic regenerative agricultural practices. Perpetual Prosperity Pumps Foundation solves this in two ways.

- By working with the Peace Corps and other qualified, training organizations in each country and internationally.
- By supplying technology and livestock to ensure a family income increase 400% or more within the first 12 months and as much as 1000% within two years.
